*The Efficiency Breeders*

### Balancing and Understanding Feed Efficiency Indicators

ADG Average Daily Gain, until recent times, has historically been used as an indicator for feed conversion with a fairly high correlation. Problem is, it also increases appetite and frame score, especially when early maturity traits are ignored. F/C Feed Conversion, while extremely important in the feedlot, favors higher intake cattle and ADG which again can increase cow size and cow appetite.

RADG Residual Average Daily Gain is a feedlot indicator again which looks at how an animal gains compared to its expected intake. Again, it tends to favor higher growth and high intake cattle.

DMI Dry Matter Intake is simply what it states. DMI is an indicator for what an animal will consume daily and unless it is balanced with production can favor inefficient cattle but is an important trait in achieving lower input cattle.

RFI Residual Feed Intake tells you whether an animal has consumed more or less than was needed for maintenance and production. Production is often measured in ADG but there have been several research studies where calves weaning weights are taken and then their mother's, post-weaning, are measured for DMI. This is a stand-alone trait with no correlation to other traits such as frame size, ADG, weaning weights, etc. RFI like DMI; however, does not tell you if an animal is efficient based on input costs vs output values. RFI does allow you to quickly analyze various size cattle, weights, gain, and intake's which would be difficult to do without RFI.

How do we use it? We have taken a system-based approach using RFI, F/C, ADG, and DMI to select bulls we want to be introduced into our feed efficiency program with the cow being our number one goal. These bulls have to be a frame size and phenotype that fit our environment and management; as well as, have a strong maternal background with longevity. Our goal at McDonnell Angus is to manage our cow size as we don't need these western cows any bigger. It is also to reduce our cow intake while still providing cattle that are competitive at the feed bunk, however they need to be profit enhancers on pasture first. We have no interest in high intake, low feed conversion cattle as a standalone selection system. This is a huge industry with lots of different profit centers. I get it, but it all starts with a mother cow and grass and that's why the rest of the industry even exists. So, we need to take care of the cow and ranchers' profitability first to have a strong industry foundation.

We always want a negative RFI bull and will give up around 5% in feed conversion if we can lower our feed intake 10% or more for our cows. Our efficiently sired steers have repeatedly proven themselves in the feedlot and we continue to get great reports from our rancher customers on how the daughters have done through the drought and their reduction in feed inputs, with no impact on Weaning weights. In fact, over the years the weaning weights have continued to improve along with the cowherd fertility. So we know it's working.

With 70% of our annual costs on the ranch for feed and pasture and with 70% of that feed being used for maintenance only, it becomes very important to our bottom line to try and improve our efficiencies and net returns on the range and in the feedlot.

**Auctioneer: Joe Goggins and Greg Goggins**

- 30 Coming Two-Year-Old Angus Bulls
- 117 Fall Yearling Angus Bulls
- 47 Registered Angus Bred Heifers

## Accommodations

Super 8 Motel 406/ 322-4101 Columbus  
Big Sky Motel 406/ 322-4111 Columbus

## Health

Health of each herd is excellent. All cattle sold according to State of Montana health regulations. Individual health papers will be furnished for interstate shipment. If your state or province requires additional tests, your purchases will be cared for at buyer's risk and expense until tests are completed. All bulls are BVD-PI tested free. Semen testing is done by Stillwater Vet, Lacey Fahrmeier, ultrasound by Samantha England.

## Trucking

Free delivery on Angus bulls up to 400 miles. \$75 off each bull purchased if you bring your own trailer. Free delivery is not available on the bred heifers, but we can help you with arrangements.

## Wintering Arrangements

Bulls can be left here and wintered. Approximate cost \$3.00/day.

## Terms

Terms, conditions and guarantees herein stated in writing shall constitute a binding contract between buyer and seller. Terms of the sale are cash or check payable at the close of the sale and prior to load-out unless other arrangements have been made with the owner in advance. Animals will be sold to the highest bidder with auctioneer settling dispute as to bid. Announcements at the sale by owner or auctioneer will take precedence over statements in the sale catalog or supplement. Each animal becomes the buyer's risk as soon as it is sold, but will be cared for by the seller until load-out or for a reasonable period of time. Everyone attending the sale does so at their own risk and Midland Bull Test Center, Big Country Breeders, or their agents assume no liability, legal or otherwise, for any accidents which may occur. Except for those specifically herein stated in writing, there are no further warranties or guarantees of any nature, expressed or implied. Retaining 1/3 interest on all the bulls.

## Guarantee

Every animal in this sale is, to the best of our knowledge, free from any disease or defect.

## Mortality Insurance Available through

John Goggins 406/ 373-5000

## Genomic Enhanced EPDs

Bulls that have been genomic tested through Angus using Neogen GS test will be marked in catalog. EPD's are current as of October 24, 2023.

## First Breeding Season Guarantee

All bulls selling for \$3,000 or more will be covered 50% by seller if they are injured during the first breeding season. Breeding season is defined as the 60 day period following the first turnout of bulls. 50% of the value of the bull up to \$8000 in purchase cost, minus one-half salvage value will be given as credit in a future Beef Country Sale or towards a replacement bull if one of equal quality is available by seller. All injured bulls must be diagnosed by a veterinarian. Please notify us as soon as possible should injury occur and prior to the injured bull being sold for salvage. All claims must be made by September 1, 2024. This guarantee does not replace mortality insurance and does not cover loss due to death or other natural occurrence or negligence. Mortality insurance is available sale day.

### Thank you for considering our breeding program and bulls.

Welcome to The Beef Country Genetics Sale!

There is nothing more core to making a ranch profitable and generational over the years than a sound, fertile cow that will stay in the herd and convert grass to pounds weaned in her calf. That coupled with our ability to manage those grasses and natural resources well sums up our greatest opportunities.

Mother nature has offered many of us in the northern states some great moisture, crops, and grass. That coupled with historic markets has sure brightened our industry. We've had a lot of compliments in the last 3 to 4 years on our genetics and how the daughters held up during some tough drought conditions. I guess that's the real test and these proven Efficiency cattle programs continue to be one of the greatest opportunities to improve our Net Return.

We continue to progeny test our efficiency sires and in 2019 we tested steers, all from one herd at Simplot Feeders near Grandview, Idaho. We tested three of our Efficiency sires against twelve other Angus and Simmental sired steer groups. The top two Efficiency sires were ours, with our top sire, the AB Capitalist steers weighing within 10lbs. of the average of all the steers and converting 19.4% better than the other twelve groups. In today's world, that is nearly \$180 less feed cost and is consistent with a set of steers we fed in 2021 near North Platte, Nebraska that finished out in June at .88/lb. gain.

The bulls selling are from our herd, including the two partnership herds of Steve & Kim Crowe and Marda Angus. Also, MJB Angus will again have a top set of bulls. We continue to partner and share herd bulls with him. Terry and Lavonne Frost of Frosty Creek Angus have a nice set of bulls, many sired by efficiency sires. Along with Jocko Valley Angus and Steve & Amy Williams of 406 Ranch.

We also have fifty very fancy registered bred Efficiency Angus heifers. We decided to sell all our replacement bred heifers raised in our Montana herd. We are holding nothing back!

If you are unable to make the sale, the bulls and heifers are available to view at Midland Bull Test. Videos will be on our website [www.mcdonnellbeefcountry.com](http://www.mcdonnellbeefcountry.com).

On behalf of Sam and I, we would like to thank everyone for your support.

Sincerely, *Leo & Sam McDonnell*

Frosty Creek Angus ranch has had a very busy year as usual. We have managed to build a new barn to replace our burned structure, there was the Montana Angus Tour stop at the ranch as well. We are fall calving during all these endeavors and the calf crop this year is loving our green grass that has been supplied in our pastures so generously this year.

Ranchers are a rare breed of constant workers who push forward to always supply the best of beef for the world. We aim to present the best bulls to all cattleman to produce the best in weight gains and feed efficiency results.

Frosty Creek Ranch is armed with many family members who participate in our program and all work together to choose diverse genetics that work for

Our feed efficiency program is managed and held accountable by Leo and Sam McDonald, Steve and Amy Williams at the Midland Bull Center. We certainly appreciate all their efforts for a successful outcome.

We look forward to visiting with you and sharing information about the cattle.

*Terry and LaVonne Frost & Family*

## **RFI (Residual Feed Intake) (lbs/day)**

The amount of feed intake an animal consumes daily, above or below its maintenance requirements as well as its performance (growth) requirements. A negative RFI is a more efficient bull.

*Example: -2.0 means the bull ate 2 lbs. less feed per day than he needed to meet his body maintenance requirements and production needs (ADG). The difference between a -2.0 and a +2.0 bull is 4 lbs. of Dry Matter Feed/Day.*

If you are keeping replacement females, by selecting for negative RFI, research has shown you have the potential to save close to \$150.00 per year on cow feed & pasture costs.

## **UNDERSTANDING EFFICIENCY AND RFI**

Historically, the weight of an animal has been the most important component in determining value, which follows closely with production being the most heavily promoted and taught value in agriculture.

However, when you consider that more than 75% of the cost of growing cattle is related to feed inputs, and that 70-75% of the feed consumed by cattle is solely for maintenance requirements, then the importance of improving the efficiency of feed intake becomes very real. With today's feed prices, improving a herds efficiency of feed utilization is obvious.

## **WHAT DOES THE RESEARCH SAY**

1. Efficiency is highly related to growth and growth is the traditional method of measuring efficiency. The problem is that using growth alone as a measure of efficiency also increase the size of the animal, which will increase maintenance requirements, which will increase appetite, which will increase the need for available feeds/grasses.
2. Using RFI will lead to improvements in feed efficiency without compounding the need for additional feeds or increasing mature size.
3. RFI allows you to produce at a level that optimizes on one's management and environment instead of stressing it.
4. RFI is a highly heritable trait, meaning that through genetic identification and then selection, one can make rapid improvements.
5. Selecting for efficiency will allow the cattle industry to become more competitive in production with swine and chicken. About 5% of the feed consumed by cattle is converted into protein, while swine and chicken are 14 and 22% respectively.
6. Research has shown there is a 0.90 correlation (very high) between bulls measured for RFI postweaning and how their daughters will perform for efficiency in the cowherd.

## **QUESTIONS AND ANSWERS**

### ***What is the heritability of RFI (Residual Feed Intake)?***

0.28-0.50 (Moderately to highly heritable).

### ***How is RFI calculated?***

Basically RFI is looking at what the feed intake requirements for maintenance are for the individual bulls and then what the feed intake requirements are for production (each individual bull's ADG) and compares that to what the individual bull consumes.

### ***How much difference can one expect to find in cattle?***

Research from Australia, Canada, and the U.S. have consistently found differences of up to 30%.

### ***If you have two cows weighing 1300 lbs and one produces 15 pounds of milk and the other 20 pounds of milk, wouldn't the other cow at 15 lbs require less feed?***

No, and it could just as well be that the 15 lbs. milk producer is a larger consumer of feed which compounds her inefficiency on both feed intake and lower production. That's the importance of measuring RFI. This is a case where size doesn't matter.

### ***What should one be aware of when using RFI?***

First and most importantly, RFI needs to be balanced with production and profitability. A negative RFI like a negative DMI with low production is no more cost efficient than the high production with a positive RFI. You need to balance RFI with production.

### ***Why can't we just use our eye and pick the more moderate, easy-fleshing cow?***

Don't confuse size or fleshing ease with efficient productive cattle. Contrary, to what some folks believe, RFI is not related to frame size, body type, or body condition. You'll find as many inefficient cows in any frame size and just because they look fat it doesn't mean they're efficient. A fat cow that is high intake with a 400 lbs calf is not going to generate much profit.

How do you Ballyhoo?

# Reading Performance Information

EPDs are current as October 28, 2022.

Updated EPDs can be viewed at [www.Angus.org](http://www.Angus.org)

Expected Progeny Difference (EPD) is the estimate of how future progeny of each sire are expected to perform in each of the traits listed.

**Calving Ease Direct (CED)** - is expressed as a difference in percentage of unassisted births, with a higher value indicating greater calving ease in first-calf heifers. It predicts the average difference in ease with which a sire's calves will be born when he is bred to first-calf heifers.

**Birth Weight EPD (BW)** - expressed in pounds, is a predictor of a sire's ability to transmit birth weight to his progeny compared to that of other sires.

**Weaning Weight EPD (WW)** - expressed in pounds, is a predictor of a sire's ability to transmit weaning growth to his progeny compared to that of other sires.

**Yearling Weight EPD (YW)** - expressed in pounds, is a predictor of a sire's ability to transmit yearling growth to his progeny compared to that of other sires.

**Milk EPD (Milk)** - is a predictor of a sire's genetic merit for milk and mothering ability as expressed in his daughters compared to daughters of other sires. In other words, it is that part of a calf's weaning weight attributed to milk and mothering ability.

**Marbling EPD (Marb)** - expressed as a fraction of the difference in USDA marbling score of a sire's progeny compared to progeny of other sires.

**Ribeye Area EPD (REA)** - expressed in square inches, is a predictor of the difference in ribeye area of a sire's progeny compared to progeny of other sires.

**Index values are expressed in dollars per head**

**Maternal Weaned Calf Value (\$M)** predicts profitability differences from conception to weaning. Traits included: calving ease direct, calving ease maternal, weaning weight, milk, heifer pregnancy, docility, mature cow weight, claw set and foot angle.

**Weaned Calf Value (\$W)** is the expected average difference in future progeny performance for preweaning merit and includes both revenue and cost adjustments associated with differences in birth weight, weaning direct growth, maternal milk and mature cow size.

**Feedlot Value (\$F)** is the expected average difference in future progeny performance for post-weaning merit compared to progeny of other sires.

**Grid Value (\$G)** is the expected average difference in future progeny performance for carcass grid merit compared to progeny of other sires.

**Beef Value (\$B)** is the expected average difference in future progeny performance for post-weaning and carcass value compared to progeny of other sires.

**Combined Value (\$C)**, an index expressed in dollars per head, includes all traits that make up both \$M and \$B with the objective that commercial producers will replace

20% of their breeding females per year with replacement heifers retained within their own herd. The remaining cull heifer and steer progeny are then assumed to be sent to the feedlot where the producers retain ownership of those cattle and eventually sell them on a quality-based carcass merit grid.

## ABOVE AVERAGE GOALS REQUIRE TARGETED BULLS

*Aim High*

The Targeting the Brand™ logo highlights registered Angus bulls with greater genetic potential to produce calves that meet the most challenging specifications of the Certified Angus Beef® brand.

Only 1 in 4 non-parent Angus bulls qualify.

### Minimum Genetic Requirements

A high efficiency bull from the 2017 Midland Bull Test Sale. In the top 15% of the breed for \$ Weaning.

*Also, sons of*

SAV Rainfall • Justified • Vermilion Bomber  
Vermilion Countdown • Sterling Pacific • Werners Flat Top

*We continue to believe that feed efficiency “in the cow herd and in the feedlot” offer the greatest opportunity for the cattle industry.*

*Basically, it never has been selected for so, rapid improvements can be made.*

*Still important that the cattle fit the environment.*

*Discipline. Maternal Efficiency to me includes fertility-longevity-structure-problem free, udders, and teats-and efficiency in production. With 70% of feed going to just maintenance requirements and half a cows life spent in a non-production phase, there are huge economic gains to be made here.*

*Look at the lbs./acre or unit along with the net return on investment and not just lbs. weaned/cow.*

Sire EPDs

**What are the benefits of selecting for low residual feed intake (RFI) animals\***

- Reduction of overall feed intake by up to 20% while maintaining the same level of production
- Reduction in the maintenance requirements of the herd by 15-20%
- Improvements in the feed conversion rates of calves of from 15-20%
- 28-50% Heritability which is high in production traits.
- 90% correlation between how a tested bull does and how his daughters do.
- Independent trait with no correlation to other traits such as fertility, milkability, performance, frame size, feet, body condition, etc. — which means you can select for this trait without having a negative impact on other traits.
- Efficiency benefits are found both in cow herd and in the feedlot.
- There is a potential to improve efficiency up to 20-25%.
- Feed & grass costs are the #1 expense in raising cattle, after fixed costs.
- 70% of feed is used just for maintenance – improving feed efficiency can have a big economic impact.

# Heifer Reference Sires

## Registered Angus Bred Heifers

We are offering all of our 2023 Montana Replacement Bred Heifers. The heifers were ultrasounded August 24th by Dr Liam Robbins earlier for pregnancy status and will be pregnancy tested again on November 28th by Dr. Lacey Fahrmeir.

They have been poured this fall and given a scourguard vaccine shot. Expect these heifers to start calving 12 days early, so a bred heifer that is due on February 23rd could possibly calve as early as February 11th.

Ultrasound does not guarantee an AI calf, but it is highly likely to be.

*For further information on the heifers, contact:*

**Leo McDonnell 406-780-0176**

Clean up bull.

"If you get a 20% improvement in feed efficiency across the board by utilizing this technology and consider a five hundred dollar average feed cost per cow, which we see in the industry in a lot of places, then if you save 20%, that's one hundred dollars that you're saving per cow that goes back into your pocket," explains Tommy Perkins Ph.D., PAS of West Texas A&M University and a member of the GrowSafe Strategic Advisory Committee as he discusses the use of feed efficient genetics to manage and reduce input costs. Feed Efficiency doesn't have anything to do with frame size."

- Tommy Perkins, GrowSafe • April 7, 2020

Pasture bred to Clean up bulls. Pregnancy tested to calve 4/8/24.

"We also continue to believe and become more convinced every year that breeding true efficiency, backed by large, collected data sets for intake, offer the industry the greatest opportunity to change and improve the profitability of our business. Environments will only allow for so much weaning weight to be expressed with changes in management or additional supplementations. That is why we put so much emphasis on RFI and on maternal production and longevity. With disciplined selection it has been proven numerous times and in multiple countries that one can reduce grass and hay consumption by up to 20% without effecting weaning weights."

- Leo McDonnell

*Expect heifers to calve up to 15 days earlier.*

# NEW GENERATION OF PERFORMANCE

We have maxed out what mother nature will allow us in weaning weights in these drier, short grass environments without heavy supplementation.

The next big advance in profitability on the ranch will be the introduction of efficiency genetics that allow a 20- 30% reduction in feed/grass inputs while still maintaining, or even increasing the same production level as one looks at pounds per unit produced.

**McDONNELL ANGUS**  
**BEEF COUNTRY GENETICS**  
*The Efficiency Breeders*

ADG - Average Daily Gain

DMI - Dry Matter Intake

RFI - Residual Feed Intake

Eff Index - measures how efficiently feed is converted to pounds of beef and ties it with RFI

## RFI Data (fall bulls)

*It is important you only compare bulls within groups as rations vary and so does weather.*

*Fall bulls were tested this summer for intake. There are 2 different test groups represented in the 2-year-old bulls and also in the fall bulls.  
RFI are just within each group.*

*Important to note that RFI is an Index with half being over and half being under.*

*No doubt, if these bulls would have been tested against other Angus herds, they would have all been negative RFI.*

*These bulls were fed a high roughage ration of 38% MegaCal's, so don't expect a lot of 4lb. feed conversion cattle.*

## FRONTIER LIVE SALE

This Sale will be broadcast live on [www.frontierlivesale.com](http://www.frontierlivesale.com). To view a sale,

1. Create an account, if you have already done so skip to next step. To create a new account, click on the word **Registration** in the upper right hand corner. You must fill out the information requested. Then click **Create Account**. An email will be sent to your email account you provided. Please click the link in the email to activate your new account.

2. Once you click the link, your account will now be activated

3. At this point, you may click **Continue To Browse Our Site**. This will allow you to view all upcoming auctions.

4. Once you see the auction you are interested in, click **Get Approved To Bid** for absentee and live bidding.

5. Please enter your information in the form. Depending on the auctioneer, different information may be requested. Click **I agree to sale terms and conditions**. Congratulations! You are now approved for the auction. Now that you're approved you can participate in the auction and bid on its items.

6. Login on sale day with the credentials provided at registration.

Call 866-313-0123 for tech help.

## COMMITMENT.

Raising quality registered Angus cattle takes commitment. As your genetic supplier, we take that seriously.

That's why we participate in MaternalPlus®. Through MaternalPlus, we devote extra time to tracking maternal traits beyond those normally required, ultimately targeting greater performance and predictability.

The data we choose to gather through this inventory-based program today sets the stage for reproductive and lifetime productivity tools tomorrow — tools to pioneer new ways of selecting the most profitable animals.

Herd improvement starts with smart decisions. A commitment to the female starts with MaternalPlus.

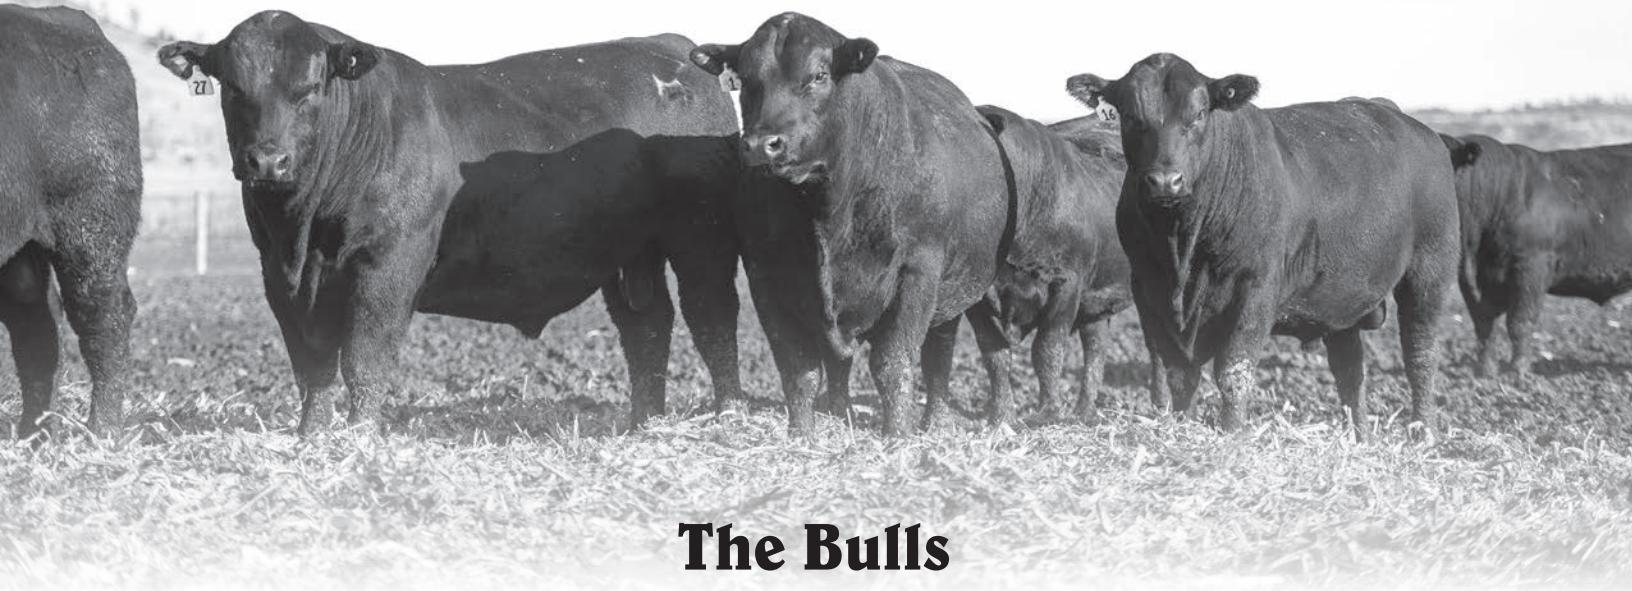

Contact AGI at 816-383-5100 or [agi@angus.org](mailto:agi@angus.org) for more information.

**ANGUS MEANS BUSINESS.**

**ANGUS**  
THE BUSINESS BREED  
[www.ANGUS.org](http://www.ANGUS.org)

## Mission Statement

*To serve our customers by being a leader  
in providing genetics that are economically relevant  
and offer the greatest enhancement to the overall profitability of their cowherd.*

## The Bulls

Complete Performance Program

Strong Maternal Program

Semen Tested & Ready to Go

Dedicated to the Profitability of our customers

New Generation Efficiency Genetic

Free Delivery up to 400 miles

Structurally Sound

# Enriched Ag

**Optimize Management. Build Resilience.  
Enhance Conservation. Increase Profits.**

Enriched Ag's IQ-Ag ranching solutions have become an important part of improving grazing management, conservation, and the bottom line for McDonnell Angus and its customers.

**"In 2021, I was invited to sit on the Advisory Board to help develop Enriched Ag. This company's integrated approach to data and technology at the ranch level positions the producer to not only take advantage of increased production and efficiency but also creates new revenue opportunities for the rancher."**

- Leo McDonnell

Using the IQ-Ag tools allows ranchers to verify, validate, and ultimately value the outcomes of their management. Use these tools to assist with marketing opportunities to fit your ranching needs.

## LOW-TOUCH INSIGHTS FOR RANCHERS - TRY THE FREE VERSION ONLINE!

**Forage Biomass Prediction**  
Satellite data to measure pasture-specific forage production today and into the future

**Drought**  
Track and predict drought status at your ranch

**Bare Ground Coverage**  
Historical and current bare ground, over-grazed, and under-grazed areas for your ranch

### Forage Allocation

Predicted herd grazing days, as well as pasture rest day and optimal recovery tracking

### Precipitation

Historical, actual, and predicted rainfall for your ranch

### Carbon Insights

Compare the carbon storage potential, carbon pricing information, and forecasts

**Enriched Ag's IQ-Ag product line also includes hardware options.**

**IQ-Ag  
CAMERA**  
BY ENRICHED AG

The IQ-Ag Camera gathers imagery from your ranch vehicle. Machine learning helps ranchers identify and quantify biodiversity, shrub cover, bare ground, and more.

**Real-Time Ranching** is an all-inclusive system for ranchers to view their insights, improve safety, and make data-driven decisions in real time.

**Real-Time
